测量螺纹中径时，建议根据被测螺纹的螺距选用相应公称直径的量针。

It is recommended that to choose corresponding pin gauge of proper nominal diameter according to the tested pitch before measuring.

注 1：

选择量针的公称直径测量单头螺纹中径时，除标有“※”符号的螺距外，由于螺纹牙形半角偏差而产生的测量误差甚小可忽略不计。

注 2：

当用量针测量梯形螺纹中径出现量针表面低于螺纹外径和测量通端梯形螺纹塞规中径时，按带“※”号的相应螺距来选择量针；此时应计入牙形半角偏差对测量结果的影响。

Note 1:

When measuring single-start thread pitch diameters, except from the ones marked with *, with nominal diameters of pin gauges, the measuring errors result from half-angle tooth error can be neglected.

Note 2:

When the surface of pin gauges lower than the outer diameters of threads as measuring trapezoidal thread pitch diameters and measuring pitch diameters of GO trapezoidal thread plug gauges, please select proper pin gauges from specification marked with *. And the half-angle tooth error shall be added in undersuch measuring conditions.
